MOTO PORCH

Suzuki SV650 Buyer's Kit

Years covered: 1999 to 2009, 2016 to present

A V-twin standard that riders keep for years because it is light, torquey and cheap to run. Older ones are now 20+ years old, so the charging system and general age matter more than the engine.

First bike? Smooth, predictable power and a low seat. A common pick for new riders who want something they will not outgrow quickly.

Generations

First generation (1999 to 2002)
Carbureted, rounder styling. Naked SV650 and half-faired SV650S.

Second generation (2003 to 2009)
Fuel injected, angular styling and a new frame.

Gladius (SFV650) (2009 to 2015)
Sold as the SFV650 Gladius with different styling. Same basic engine.

Current generation (2016 to present)
Updated engine, ABS available, low-RPM assist.

Safety recalls on record

Recalls are repaired free by a dealer. Ask the seller for proof the work was done, or have a dealer check the VIN.

- [ ] 2013: fuel system, other:delivery:hoses, lines/piping, and fittings (NHTSA #15V844000)
- [ ] 2013: engine and engine cooling:engine (NHTSA #15V852000)

SV650-specific checks

- [ ] Check charging voltage at the battery, engine off and at a fast idle.
- [ ] Ask if the regulator/rectifier has been replaced on 1999 to 2009 bikes.
- [ ] Look for drilled bolts (safety wire), rearsets or race bodywork that point to track use.
- [ ] On 1999 to 2002 bikes, judge the cold start and idle for carburetor problems.
- [ ] Check fork seals and the rear shock for leaks. Original suspension on older bikes is often worn out.

Before you go

- [ ] Ask the seller not to start or warm up the bike before you arrive. A cold start shows problems a warm engine hides.
- [ ] Ask for the VIN by text and run a recall check at nhtsa.gov/recalls before you drive over.
- [ ] Ask for a photo of the title. Confirm it is in the seller's name and is not marked salvage, rebuilt or flood.
- [ ] Bring a flashlight, a rag, a tire pressure gauge, and cash or a payment plan you have already agreed on.
- [ ] If you are a new rider, bring someone who can ride the bike for you on the test ride.

Paperwork

- [ ] VIN on the frame (steering head) matches the VIN on the title.
- [ ] Title is in the seller's name, with no lien listed (or a lien release in hand).
- [ ] Title is not branded salvage, rebuilt, flood or junk.
- [ ] Seller's ID matches the name on the title.
- [ ] Service records, receipts or a logbook, if any.
- [ ] Both keys are present.

Walkaround

- [ ] Tires: check tread depth and the 4-digit DOT date code (week and year). Tires older than about 5 to 6 years should be replaced regardless of tread.
- [ ] Chain and sprockets (if chain drive): hooked or pointed sprocket teeth, kinked or rusty links, or a chain that pulls far off the rear sprocket mean replacement soon.
- [ ] Brakes: pad thickness, rotor grooves or lip, and brake fluid color (clear to light amber is good, dark brown is overdue).
- [ ] Fork tubes: look for oil on the tubes or below the seals, and pitting on the chrome.
- [ ] Drop damage: scuffed bar ends, levers, footpegs, mirrors, engine covers, frame sliders and the tank. Bent levers or a crooked handlebar mean it went down.
- [ ] Frame and subframe: cracks, kinks, fresh paint or welds near the steering head, footpeg mounts and swingarm pivot.
- [ ] Leaks: oil or coolant under the engine, around the cylinder head, the water pump and the drain plug.
- [ ] Fluids: oil level and color in the sight glass or dipstick. Milky oil can mean coolant mixing in.
- [ ] Steering head bearings: with the front wheel off the ground (or a friend leaning the bike back), turn the bars slowly. Notchy or a center detent means worn bearings.
- [ ] Wheel bearings: grab each wheel top and bottom and try to rock it. Any clunk means worn bearings.

- [ ] Electrics: headlight high and low, brake light from both the lever and pedal, turn signals, horn, neutral light, kill switch and side stand switch.
- [ ] Modifications: aftermarket exhaust, intake or wiring. Ask what was changed and whether the fuel system was tuned to match.

Cold start

- [ ] Feel the engine before starting. If it is already warm, ask why.
- [ ] Starter should spin the engine briskly. A slow crank points to a weak battery or charging problem.
- [ ] Watch the exhaust on startup. Blue smoke means burning oil. White smoke that does not clear after warm-up can mean coolant.
- [ ] Listen for knocking, loud ticking or rattles that do not settle as it warms up.
- [ ] With a multimeter: about 12.6V at the battery engine off, and roughly 13.5V to 14.5V with the engine at a fast idle. Outside that range, suspect the charging system.

Test ride

- [ ] Clutch: in a higher gear at low RPM, open the throttle firmly. If RPM rises but speed does not, the clutch slips.
- [ ] Shifting: every gear, up and down. Watch for false neutrals or jumping out of gear.
- [ ] Brakes: firm lever and pedal, straight stops, no pulsing.
- [ ] Handling: no wobble or pull with relaxed hands on a straight road.
- [ ] Throttle: smooth pickup, no stumbling, and the throttle snaps closed on its own.
- [ ] After the ride: look under the bike again for fresh leaks and check that the cooling fan runs when hot (liquid-cooled bikes).

Questions to ask the seller

- [ ] How long have you owned it, and why are you selling?
- [ ] Has it ever been dropped, laid down or in an accident?
- [ ] Do you have service records? When was the last oil change?
- [ ] When were the valve clearances last checked?
- [ ] How old are the tires, chain and battery?
- [ ] What modifications have been made, and do you have the original parts?
- [ ] Have all recalls been done by a dealer?
- [ ] Is the title in your name, and is there a loan on it?
- [ ] Has it been stored outside or through winters without being ridden?

Red flags: walk away if you see these

- The title is not in the seller's name, or the VIN does not match.
- The seller warmed the bike up before you arrived and will not let you see a cold start.
- The seller refuses a test ride with cash in hand or a second rider present.
- Fresh paint, new levers and new mirrors on one side only (a hidden crash).
- Milky oil, steady blue smoke, or a clutch that slips on the test ride.
- A story that changes when you ask the same question twice.

Price worksheet

List 5 to 10 comparable bikes (same model, similar year and miles) before you go.

Listing / source	Year	Miles	Asking $	Notes

Costs this bike will need soon (tires, chain, brakes, service, recall work, damage):

Listing / source	Year	Miles	Asking $	Notes

Negotiation script

- Before you go, find 5 to 10 comparable listings (same model, similar year and miles) and note their asking prices on the worksheet.
- Write down every item from your inspection that will cost money: tires, chain and sprockets, brake pads,

overdue service, recall work, damaged parts. Get a rough price for each.

- Open with the facts, not a lowball: "It needs tires and a chain soon, which is about $X. Comparable bikes are listed at $Y. I can do $Z today."
- Stay quiet after your offer. Let the seller answer.
- Decide your walk-away price before you arrive and stick to it. There is always another bike.

Important

This kit helps you ask better questions and spot common problems. It is not a mechanical inspection and cannot tell you whether a specific motorcycle is safe. If you are unsure, pay a qualified mechanic for a pre-purchase inspection or walk away. Recall data comes from NHTSA; confirm open recalls for the exact VIN with a dealer or at nhtsa.gov/recalls.
